

1 Unit

**GAMSCO**

**GAMSCO**  
**Plasma Container Carton**

### **Instructions**

This carton should be used for freezing, storing and thawing plasma in Transfer Pack Container (300-400 mL capacity).

**Loading:** Form box and tuck in one end. Place plastic plasma container in box with label facing towards window. Fold over top of container and tuck in top flap of carton.

**Freezing:** Place this carton with its plasma container in freezer. The carton may be frozen or stored in any position. Faster freezing is obtained by laying flat on freezing shelf.

**Storage:** Store frozen plasma in this carton in the freezer compartment. Once contents are frozen the carton helps reduce the possibility of cracking the frozen plasma container.

**Thawing:** Remove carton from freezer and place in plastic overwrap. Seal overwrap tightly to prevent any moisture from entering product, and place in constant temperature water bath at 37°C until thawed.
